It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 49 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence. as soon as it is available and the be preserved. 1075 1175 2180 2280 2280 3301 3401 4593 4693 2179: contry Carlo 12279: gap of unknown 1 3300: contig of 1021 P 1074: contig of 1074 bp in length 1174: gap of unknown length 2179: contig of 1005 bp in length gap of unknown contig of 1779 gap of unknown contig of 1512 gap of unknown gap of unknown contig of 1192 gap of unknown contig of 1527 gap of unknown contig of 1120 bp in length bp in 1 ďď bp in length length length length length accession number will 'n in length length length length length

                                                                                                                                                                            The present sequence encodes a DWF4 polypeptide. The polypeptide is a cytochrome P450 enzyme that mediates multiple steps in synthesis of cytochrome P450 enzyme that mediates multiple steps in synthesis of prassinosteroids. Specifically, it mediates multiple brassinosteroids. The DWF4 22alpha-hydroxylation steps in brassinosteroid biosynthesis. The DWF4 polynucleotide is used for altering the phenotype of a plant. DWF4 polynucleotide is used for altering the phenotype of a regamble plants display a dramatic reduction in the length of different organs, and this size reduction is attributable to a defect in cell elongation. The DWF4 polynucleotides and polypeptides can be used in diagnostic assays and to generate antibodies, which can be used to produce
                                                                                                                                                                                                                                                                                             New isolated \text{dwf4} polynucleotide useful for altering the phenotype of plants, for diagnostic assays and in the production of antibodies -

The activity of the modified sequences of the CC invention may be described as cytostatic. The object of the invention is CC constanting, as well as oligonuclectides and/or PNA-oligomers for CC signalling, as well as oligonuclectides and/or therapy of genetic and CC epigenetic parameters of genes associated with cell signalling. The CC epigenetic parameters of genes associated with cell signalling. The CC chemically modified DNA provided by the invention is useful for diagnosis and/or therapy of diseases such as sociat tumours and cancer. The sequences CC given in records AHI/7011-AHI/7012 represent chemically pre-treated CC Note: The sequence data for this patent is not represented in the printed CC specification, but is based on sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                              Matches 164;

The invention relates to 224 nucleic acid sequences comprising at least 22 18 bases of a chemically pretreated gene associated with gene regulation 22 selected from 43 known genes (or complementary sequences). The 23 chemical pretreatment converts cytosine bases unmethylated at the 24 dissimilar to cytosine, to enable analysis of cytosine methylations. 25 chemical pretreatment converts cytosine bases unmethylated at the 26 dissimilar to cytosine, to enable analysis of cytosine methylations. 26 cm 27 cm bn Ma sequences, oligomers (or sets/arrays) and method are 27 cm bn Ma sequences, oligomers (or sets/arrays) and method are 28 cm secolated with gene regulation and in therapy of such diseases, by 28 cm abling analysis of the cytosine methylation patterns of such genes, 29 cm abling analysis of the cytosine methylation patterns of such genes, 29 cm and therapy of e.g. severe combined immunodeficiency disease, cardiac 29 cm and therapy of e.g. severe combined immunodeficiency disease, cardiac 29 cm and 20 cm and 20 cm asyndrome, 30 cm and 20 cm asyndrome, 30 cm and 20 cm asyndrome, 30 cm and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    4591
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              4651
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               their complementary sequences.
Note: The sequence data for this patent did not form part of the specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     epigenetic parameters of genes associated with signal transduction. The genomic DNA can be obtained from cells or cellular components which contain DNA, e.g. cell lines, blopsies, blood, sputum, stool, urine, cerebral-spinal fluid, tissue embedded in paraffin such as tissue from eyes, intestine, kidney, brain, heart, prostate, lung, breast or liver, histologic object slides, and all their possible combinations. The sequences of the invention are useful for the diagnosis and therapy of diseases associated with signal transduction e.g. solid tumours and cancer. ABK31158-ABK31545 represent chemically pretreated genomic DNA sequences of different genes associated with signal transduction, or the displacement genes associated with signal transduction, or
                                                                                                                                                             Homo
                                                                                                                                                                                                                                                                  Human
                                                                                                                                                                                                                                                                                                19-MAY-2000
                                                                                                                                                                                                                                                                                                                                                         AAA01920 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              326

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The polynucleotides sequences can be used in a method for detecting differentially expressed genes correlated with a cancerous state of a mammalian cell. The polynucleotides can also be used as probes for detecting and mapping related genes. They can be used in diagnosis and prognosis of diseases and disorders (e.g. identification of prognosis of cancer and disorders (e.g. identification of prognosis of cancer to therapy). This is particularly for breast cancer, oestrogen receptor-positive breast cancer, oestrogen receptor-positive breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAA00010 to AAA02716 represent polynucleotides isolated from cDNA libraries constructed from human colon cancer cell lines. The present invention also describes a method of detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous, where detection of the differentially expressed gene product is correlated with a cancerous state of the cell from which the test sample was derived.

                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, ADDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psorlasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

                                                                                                                                                                                                                                           8417
                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                         rheumatoid arthritis, psoriasis and inflammatory/ulcerativ diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acid comprising frag

The invention relates to a nucleic acid, which comprises a segment of the chemically pretreated DNA of genes associated with DNA transcription from one of 346 sequences, and an oligomer, in particular an oligonucleotide to the chemically pretreated DNA of genes associated with DNA transcription. The set of oligomer that the pretreated with DNA cytosine methylation state and/or single nucleotide polymorphisms (SNPs) in a chemically pretreated genomic DNA. The nucleic acids are useful for
                                                                                                                                                                                                                                                                                                                                                                                          Claim 1;

                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method for identifying a molecule involved in lipid regulation comprising identifying a molecule that binds to or inhibits binding of a molecule to high bone mass (HBM) or its wild type gene, Zmax1. Compounds identified by the method are useful for treating, diagnosing, preventing or screening for normal and abnormal lipid-associated conditions, including arteriosclerosis, cardiovascular disease, stroke, and osteoporosis. The compounds may also be used in the treatment or prevention of diabetic atherosclerosis, neurovascular conditions caused by plaque build-up, poor circulation due to plaque build-up and associated poor wound healing. The methods may be used in gene therapy, pharmaceutical development, and disorders. Molecules identified by comparison of Zmax1 and HBM systems can be used as surrogate markers in pharmaceutical development, in diagnosis of human or animal bone disease, and in the treatment of bone diseases. Sequences ABK22776-ABK23411 represent cDNA molecules encoding human Zmax1 and HBM, and PCR primers, probes, linkers and adapters of the invention.

                                                                                                                                                                                                                                                                     15994
                                                                                                                                                                                                                                                                                                                                                                         15934
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method for identifying a molecule involved in lipid regulation comprising identifying a molecule that binds to or inhibits binding of a molecule to high bone mass (HBM) or its wild type gene, Zmax1. Compounds identified by the method are useful for treating, diagnosing, preventing or screening for normal and abnormal lipid-associated conditions, including arteriosclerosis, cardiovascular disease, stroke, and osteoporosis. The compounds may also be used in the treatment or prevention of diabetic atherosclerosis, neurovascular disease, stroke, and osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            conditions caused by plaque build-up, poor circulation due to plaque build-up and associated poor wound healing. The methods may be used in gene therapy, pharmaceutical development, and diagnostic assays for boundevelopment disorders. Molecules identified by comparison of Zmax1 and HBM systems can be used as surrogate markers in pharmaceutical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; mouse; Zmax1; HBM; high bone mass gene; lipid regulation; stroke; lipid-associated condition; arteriosclerosis; cardiovascular disease; ss; osteoporosis; atherosclerosis; diabetic atherosclerosis; plaque build-up; neurovascular condition; wound healing; gene therapy; PCR primer; probe; bone development disorder; antiarteriosclerotic; cardiovascular;

                                                                                                                                                                                                     The present invention describes the human Zmax1 gene and the high bone mass (HBM) gene, which are found on chromosome 11q.13.3. The Zmax1 and HBM genes have osteopathic activities. The genes can be used in gene therapy and in the production of vaccines. They can be used in the diagnosis and treatment of bone disorders including osteoparosis, Paget's disease, solerostosis, osteomalacia and fibrous dysplasia.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       204
                                      CC The invention relates to a nucleic acid comprising a sequence of at least CC 18 bases of a segment of chemically pretreated DNA of genes associated CC with cell signalling. The activity of the modified sequences of the CC invention may be described as cytostatic. The object of the invention is CC to provide the chemically modified DNA of genes associated with cell convention as well as oligonucleotides and/or PNA-oligomers for CC detecting cytosine methylations, as well as a method which is CC particularly suitable for the diagnosis and/or therapy of genetic and CC epigenetic parameters of genes associated with cell signalling. The CC chemically modified DNA provided by the invention is useful for diagnosis and therapy of diseases such as solid tumours and cancer. The sequences CC genemic DNA's of genes associated with cell signalling.

CC Note: The sequence data for this patent is not represented in the printed CC speculication, but is based on sequence information supplied by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABL70459,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                30802
